

Amin Lebsir

Data Lead · Cloud Data Lead · Data Platform Architect

Data engineering and platform leader with **17 years of overall experience**, including **11 years in capital markets**. I build lakehouse, event-driven and cloud platform systems that turn risk and business data into governed production products with strong release discipline and low operational overhead.

CORE STRENGTHS

Data & lakehouse

Apache Spark

Iceberg

Parquet

Athena

Glue

Databricks

Delta Lake

SQL

Cloud & platform

AWS

Azure

Kubernetes

AKS

Docker

Terraform

GitHub Actions

Backend & delivery

Java

Spring Boot

Python

Scala

Kafka

Event Hubs

PostgreSQL

CI/CD

CREDENTIALS

Azure Databricks Fundamentals

Certified in 2025

Master 2 in Computer Science

Université d'Évry · 2008–2009

SELECTED IMPACT

No-code risk pipeline platform with safe promotion rails

Designed a JSON-driven pipeline model that lets analysts and business teams define processing logic while the platform compiles it into Spark and Spark SQL execution. Wrapped it in a controlled lifecycle with draft, validated and live states, immutable versions, automated validation gates and approval-based promotion to production.

Governed business screens over raw S3 and risk data

Built the path from catalogued raw data to business-facing screens: automatic data catalog indexing, admin-configured views, drill-down and drill-through navigation, per-scenario analysis, and correct re-aggregation logic for additive and non-additive measures such as VaR.

Cross-cloud event-driven migration of production risk workloads

Replaced file-watching integrations with AWS event-driven components using S3, Lambda, Glue and EventBridge, while bridging AWS and Azure workloads and preserving traceability, monitoring and delivery control across the migration path.

Lakehouse patterns that transfer cleanly to Databricks

Applied Spark, Iceberg, Athena and governance patterns that map directly to Delta Lake, Unity Catalog, Databricks SQL and Delta Live Tables, with particular depth in data correctness, release discipline and performance-aware risk aggregation.

Platform engineering that keeps delivery boring

Built reusable CI/CD assets, Kubernetes-based runtime foundations, passwordless cloud authentication patterns, and cost-control automation aimed at making data and platform systems reproducible, secure and inexpensive when idle.

RECENT EXPERIENCE

Data Lead / Cloud Data Lead

Sep 2026 – Present

Engie Global Markets

Capital markets risk platform migration to AWS

- Led migration of legacy production risk indicators from OLAP and CSV-based flows to an AWS-native data platform.
- Designed S3, Lambda, Glue and EventBridge patterns for event-driven ingestion, processing and monitoring.
- Built a no-code platform that serialises business designs to JSON and executes them on Spark and Spark SQL.
- Implemented cross-cloud communication between AWS and Azure components and improved end-to-end tracking.

Lead Developer / Data Platform Lead

Oct 2022 – Mar 2026

Société Générale Corporate & Investment Banking

Fraud-control and analytics pipeline platform

- Built a Spark-based ETL and execution framework for anti-fraud control designs and operational analytics.
- Developed an interpretation engine converting JSON directives into executable Spark logic.
- Implemented job execution, monitoring and update services around Spark workloads.
- Owned orchestration, cloud infrastructure, health monitoring and complex Spark SQL control scenarios.

PROFESSIONAL EXPERIENCE

Consultant, Java / Big Data

Oct 2021 – Oct 2022

Natixis Corporate & Investment Banking

- Contributed to counterparty risk architecture modernisation with microservices and CI/CD standards.
- Implemented distributed cache and publisher-consumer patterns to improve risk-calculation performance.
- Built shared Jenkins pipeline libraries to standardise delivery workflows across teams.

Senior Java / Big Data Developer

Jun 2018 – Oct 2021

Société Générale Corporate & Investment Banking

- Delivered big-data execution frameworks for FRTB default-risk metrics on Azure-based platforms.
- Designed Kafka-driven messaging and result distribution toward downstream OLAP consumers.
- Migrated data projects from on-premises data lake stacks to Azure and maintained production services.

Consultant, Distributed Systems

Jan 2017 – May 2018

HSBC Global Markets

- Led development for fixed-income functionality within a cross-asset risk and PnL platform.
- Coordinated offshore teams and built shared cache, workflow and REST service capabilities.
- Supported CI/CD and performance optimisation across distributed compute grids.

Java Core / SQL Developer

Apr 2014 – Jan 2017

Société Générale Corporate & Investment Banking

- Built low-latency trade capture and position-management components for synthetic prime brokerage workflows.
- Delivered re-rating and historical replay APIs, BDD test suites and high-touch production support.

Java / JEE Developer

Jan 2012 – Apr 2014

PMC Carrus Group

- Developed alerting and integration services for real-time betting transaction systems.
- Implemented messaging, server-push and database procedures, and coached junior developers.

Java Consultant

Jul 2010 – Dec 2011

VINCI / Cofiroute

- Built file-conversion and supervision applications using Java, Spring Batch, XML and Oracle.

KEY THEMES ACROSS THE PORTFOLIO

- Risk data products with auditability and release control
- Serverless and Spark-based data processing on AWS
- Catalog, discovery and governed access to data assets
- Interactive drill and aggregation paths for business users
- Correct treatment of non-additive metrics such as VaR
- Reusable developer platforms and CI/CD templates
- Hybrid and cross-cloud operating models
- Cost-aware runtime design and scale-to-zero instincts
